

COMPUTATIONAL IMAGING

L0. Introduction to the course

Dmitry Dylov

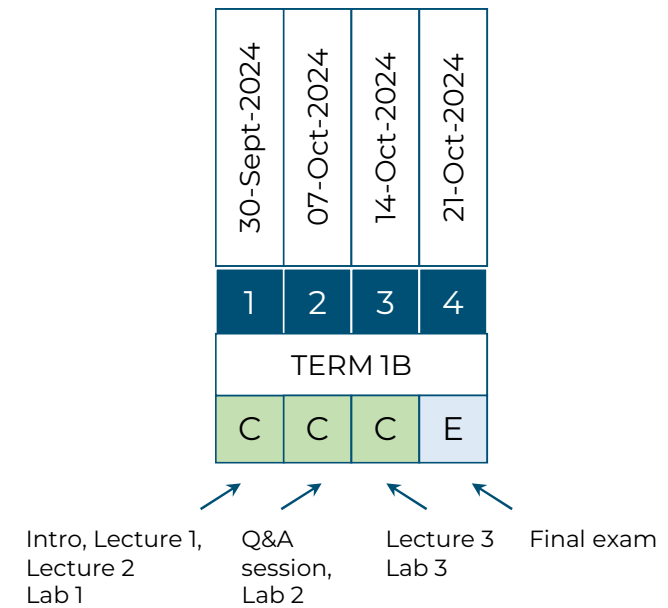

Associate Professor

Skoltech

Crash course

- Large volumes of material with practical focus
- Learn while doing something by hands

Schedule overview

Computational Imaging

Jump to today Edit

In the computational era of everything, imaging has not become an exception. Computational algorithms allow both to extract valuable information from a scene and to improve the very sensor that forms the image. Today, computational and image processing enhancements became integrable parts of any digital imager, be it a miniature smartphone camera or a complex space telescope. This crash course is designed as a prerequisite for those students who would like to venture into the field of Computer Vision. We will cover foundational mathematical equations that are involved in the image formation and in the geometric projection principles. The concept of Point Spread Function that distorts the object will be explained on particular examples and will be experimented with for the tasks of image reconstruction and denoising. Image processing will be covered with an emphasis on the Python libraries to be used in the rest of the imaging-related courses on the DS/IST tracks (openCV and others). A basic DSLR photo camera will be considered as a model for understanding Fourier Imaging and Filtering methods in a laboratory exercise. Hands-on tutorials on how to select a camera and a lens for your machine vision application will be provided. The theory of color and stereo light-field cameras will be covered using the models of commonplace Bayern RGB sensors; as well as state-of-art spectral and multi-lens imagers. The course will consist of three theoretical lectures riffled by three graded in-class laboratory coding sessions on the subjects covered in the theoretical lectures. 100% attendance is mandatory. There will be a single in-class exam during the evaluation week and no homework.

Course summary:

Date	Details	Due
Mon, 30 Sep 2024	Lecture 1: Imaging Math & Lecture 2: Image Processing (part 1)	9:00 to 12:00
	Lecture 2 (part 2) & Laboratory 1: Basic Photography and DOF Composite	9:00 to 12:00
Fri, 4 Oct 2024	Laboratory 1: Basic Photography and DOF Composite	12:30 to 15:30
	Laboratory 1 - Basic Photography and DOF Composite	due by 15:30
Mon, 7 Oct 2024	Q&A session on Lecture 1 & 2	9:00 to 12:00
	Laboratory 2: Fourier domain and deconvolution	9:00 to 12:00
Fri, 11 Oct 2024	Laboratory 2: Fourier domain and deconvolution	12:30 to 15:30
	Laboratory 2 - Fourier domain and deconvolution	due by 15:30
Mon, 14 Oct 2024	Lecture 3: Future of Imagers	9:00 to 12:00
	Laboratory 3: 3D reconstruction / Image Processing and Computational Illumination	9:00 to 12:00
Fri, 18 Oct 2024	Laboratory 3: 3D reconstruction / Image Processing and Computational Illumination	12:30 to 15:30
	Laboratory 3a - Image Processing and Computational Illumination	due by 15:30
	Laboratory 3b - 3D reconstruction	due by 15:30
Mon, 21 Oct 2024	Final Exam	9:00 to 12:00
	Final Exam	due by 12:00
	Class	9:00 to 12:00
Fri, 25 Oct 2024	Class	12:30 to 15:30
	Class participation	due by 23:59

General info – “crash course”

- Fifth offering at Skoltech
- Only three weeks long
- No Homeworks, No Midterm; but a good portion of self-study is assumed
- Attempt was made to align with parallel offerings [Imaging (LS), Biophotonics (PHY), Computer Vision (CV), Deep Learning (DS)].
- The goal is to create “computational mindset” and set bookmarks in memory
- Laboratory works: in-class | independent | open book | honor code
- We will provide DSLR camera kits
- **Never coded before? Workarounds for programming tasks (see me in person!)**

How to code?

```
Python Compare Two Images
1 # Import the necessary packages
2 from skimage.measure import structural_similarity as ssim
3 import matplotlib.pyplot as plt
4 import numpy as np
5 import cv2

We start by importing the packages we'll need -- matplotlib for plotting, NumPy for
numerical processing, and cv2 for our OpenCV bindings. Our Structural Similarity Index
method is already implemented for us by skimage-image, so we'll just use their implementation.

Python Compare Two Images
7 def mse(imageA, imageB):
8     # the 'Mean Squared Error' between the two images is the
9     # sum of the squared difference between the two images;
10    # NOTE: the two images must have the same dimension
11    err = np.sum((imageA.astype("float") - imageB.astype("float")) ** 2)
12    err /= float(imageA.shape[0] * imageA.shape[1])
13
14    # return the MSE, the lower the error, the more "similar"
15    # the two images are
16    return err
17
18 def compare_images(imageA, imageB, title):
19    # compute the mean squared error and structural similarity
20    # indices for the images
21    m = mse(imageA, imageB)
22    s = ssim(imageA, imageB)
23
24    # setup the figure
25    fig = plt.figure(title)
26    plt.suptitle("MSE: %.2f, SSIM: %.2f" % (m, s))
27
28    # show first image
29    ax = fig.add_subplot(1, 2, 1)
30    plt.imshow(imageA, cmap = plt.cm.gray)
31    plt.axis("off")
32
33    # show the second image
34    ax = fig.add_subplot(1, 2, 2)
35    plt.imshow(imageB, cmap = plt.cm.gray)
36    plt.axis("off")
37
38    # show the images
39    plt.show()
```

Grading

Group	Weight
Attendance	10%
Labs	60%
Final Exam	30%

Attendance policy. 100% expected. Every class, we check attendance with an easy quiz.

Academic integrity. Refer to regulations on academic integrity.

Collaboration policy. Independent work only (except when team work is announced explicitly).

Ivy League Honor Code (since 1893)

"I pledge my honor that I have not violated the Honor Code during this examination."

See full text at: <https://honor.princeton.edu/>

"...under the honor system, students have a twofold obligation: individually, they must not violate the code, and as a community, they are responsible to see that suspected violations are reported..."

Week 1 – Understand Imaging Math

Lecture Date	Event	Content
September 30	Lecture on Imaging Principles and Image Processing	Imaging math, Convolution, Fourier Transform, Filtering. Object-Image Relationship. General formulation of image processing. Discrete Fourier representation. Image restoration. Signal and Noise.
October 4	Laboratory *	Learn basics of a digital camera (Exposure, Aperture, ISO, Focusing) Dataset creation for the rest of the course. Blurring and bokeh imaging. Filtering and de-convolution exercises. Point-wise and area-wise filtering.

* *Bring your digital cameras*

Week 2 — Image Processing for Computational Imaging & Illumination

Week 3 — Specialized camera control (RL) & Video streams

Monday Lectures: me talking | Friday Labs: you working

Time:

9:00	Lab assignment becomes available in canvas, TAs arrive.
10:00	Lecturer arrives, Q&A
10:30	Attendance sheet distributed. Once filled in, everyone is free.
11:00 – 15:30	Do what you want (independently!). TAs and perhaps Lecturer are available for Q&A (we will sit somewhere).

You can submit after 15:30; but you will lose **up to 50%** of points

Space:

We have one room reserved for lectures and labs: **B4-3005**

After the assignment is discussed, work where you want.

See you on Friday! (or sooner if you need)

If you want to start playing with the camera before the first lab, sign up for individual practice session here (**ONLY 1 TIME SLOT PER STUDENT**):

<https://docs.google.com/spreadsheets/d/1VSB8QuaHqeFLJIXPaeHkgPY4RAm2cMCO/edit?usp=sharing&ouid=111712398947439431412&rtpof=true&sd=true>

If you still have questions after practice, you may consult with Vladimir on
Wednesday, October 3, from 14:00 till 17:00.
